

i2i iPhone to System i Your Mobile Connection

Get secure iPhone access to your business using only your existing System i as the Internet server...

i2i Lookup

Access your System i data from an iPhone, bypassing your RPG legacy applications entirely.

i2i Lookup features Auto-Suggest for fast customer and inventory item lookups. View descriptions, images, pricing and availability on an iPhone, anywhere, anytime.

i2i Data Entry

Add a password-secure mobile front-end to your System i applications with no changes to your RPG code. Sales people place orders from the field, eliminating paperwork, lost orders and delays. **i2i Data Entry** even stores new data on an iPhone where there's no cell signal, automatically uploading to the System i later.

i2i Dashboards

System i data looks great on an iPhone! Enjoy compelling visual data renderings including graphs, bars, pies, meters and gauges.

i2i Reports

Easily download your familiar RPG-generated reports for convenient viewing on an iPhone.

Your System i has a wealth of data from your operations, but access is limited. Business grows when customers and people from every level of your organization begin to access your System i remotely. Anytime, from almost anywhere.

We're IBM i specialists who understand how to quickly and safely modernize the AS/400 platform and extend your system investments.

SYSTEM REQUIREMENTS

Server:

Any iSeries, System i , or Power System running IBM i

Client:

Any iPhone or other smartphone

WEB SKILLS UPDATE

Update your programmers' skills for the web world. Sentinex web training modules advance traditional System i developers to create and support today's browser-based systems.

WEB ENABLEMENT
